

Azure VM with Terraform

Here, we create an Azure VM with the lowest possible SKU, a rudimentary network, Ubuntu LTS (currently 18.04 LTS is the newest version Azure offers.) and web server *nginx* installed.

Goal is to see the default *debian* screen of *nginx* on port 80 (http) under <your_external_ip>

Location is your VNET's location. Like 'westeurope'.

Most things are hardwired. Output is your public IP.

Things you should change:

azurerm_resource_group.location
azurerm_linux_virtual_machine

Your location
Standard_<cheapest_SKU>
